Report "Students time-management Analysis"

- 1) The aim of this report is to assess the results of the survey carried twice in 2014 and 2015 on typical USA students' weekday activities.
- 2) General information:
1000 University and college students were questioned personally and/or via Internet about their general weekday. The data shows that teaching sleeping stands on the first position among respondents. The least ~~important~~ time-demanding activity is grooming, which takes less than an hour.
- 3) The most significant trends:
Comparing Statistics, we are able to see dramatical reduction of time used for ~~such~~ activities marked as "other". That illustrate the decrease in variety of extracurricular entertainments and hobbies in previous years. Besides, students catch on sport. However, students catch on sports more weekdays. The importance interest in travelling has also increased.
- 4) Other contrasts:
I would like to emphasize slight increase in students pursuit of working alongside with their less attention to studying in free-time (one hour change). More time spent on eating and drinking have to be mentioned though it may be result of other schedule differences.
- 5) Conclusion:
To sum up, students try to pay more attention to activities, which might have their future effect positively in long term (such as leisure activities, trainings, money-earning), but in price of education and self-made sleep deprivation. However, their time-management in 2015 still seems like and balanced.
