18.

Recipient: Ann Smith,
head teacher of Cambridge
University.

Author: John Doe,
third ^{year} ~~grade~~ student
(mobile: 123-456-78-90).

12 February 2016

A Report on How American Students Spend Their Time on an Average Weekday.

Research is being conducted on how students here in the university spend their average time. Our team has gathered the data relevant to this subject (see appendix).

The team was given a task to interview all Cambridge University students in their extracurricular time. The task was carried out for two years. The assessed data is as follows: in 2014 respondents used 8.6 hours a day for sleeping, 3.8 hours for leisure and sports, 3.4 hours for learning, 9.4 hours for working and related activities (see the chart for full info). In 2015 they started to sleep less by 90 minutes and ^{decreased} work out more by about 108 minutes; learning time was ~~increased~~ ^{decreased} by an hour and ~~learning~~ working time increased by around 24 minutes. They also started to travel more.

It is apparent that nowadays some of the sleeping time ^{has been} ~~was~~ substituted by sports and travelling. For some reason the time required for eating and drinking has been doubled, almost as travelling time.

Conclusion: the new napping technique implemented in previous year

in pursuit of increasing productivity was a success. It is
recommended to try to help the commuters to catch on because
they started to spend more time going here and back home.
