Introduction. I had an aim to do a project to find out what students in the USA usually spend their time on.

General information. To start with, I assessed some data, taken by professors of different universities and colleges who questioned their students in 2014 and 2015 to find out on which educational and extracurricular activities students spend most part of their time.

Comparison. As the charts show, most time during an average weekday is spent on sleeping. However, in 2015 students shortened their sleeping time on an hour and a half, reaching only seven hours instead of eight hours and a half as in 2014. Time spent on leisure activities and sports increased from 3,8 to 5,6 hours between the year 2014 and 2015.

Travelling time changed dramatically between these years, starting with only an hour and a half, it skyrocketed to almost 3 hours.

Time for drinking and eating may soon catch on time for education as it doubled in a year from 1 to 2 hours, when education time had a fall down from 3,4 to 2,4 hours a day.

Grooming and working time only fluctuated without any significant changes. What is more, students have only half an hour to spend on other activities in 2015 compared to 2,3 hours in 2014. There was some pursuit and substitution connected with different activities.

Conclusion. To sum up, some activities started taking more time from students, some less or about the same amount. But in general, time situation changed between these years.
